Rummel Construction is an earth-moving industrial construction company based in Scottsdale with approximately 500 employees. Their jobs are classified into three main areas: operations, construction management, and maintenance. Most of their projects are in the Phoenix area, but they do have some projects in other locations in the state.

Internship programs are reserved for college students who are interested in a career pathway into construction management. During a summer, the intern will learn from the company's project managers or project engineers.

Rummel Construction's apprenticeship programs are reserved for those already employed with them.

They have a great need for heavy equipment mechanics. Anyone with mechanical education, experience, or aptitude (i.e. "good with their hands") is encouraged to apply. You can start as a "mechanic helper" as you learn and train.
